

## Fungi-like Protists

- **All Fungi including Fungi - like Protists**
- lack chlorophyll.....can't photosynthesize
- Must absorb their nutrients...saprozoic

Fungi like Protists are not true Fungi because:

- **they have centrioles** and they **do not have chitin** in their cell walls
- 2 groups...Slime Molds and Water Molds

- Slime molds are found decomposing material on land

- Water molds are found mostly decomposing material in the water....caused the potato famine in Ireland in the 1840's
- Condition were very wet and cool during this time...millions starved while millions of others moved to North America to start a new life.
